

Connecting your mobile device to Levven Q

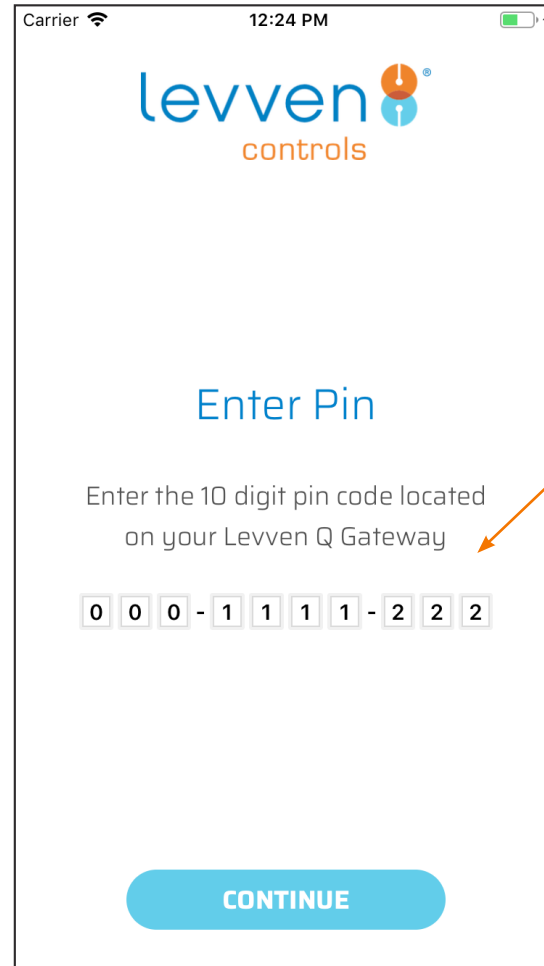

1. INSTALL APP

Complete the steps to power and connect Levven Q to the internet and pair it to a controller in the home (see "Connecting Levven Q to your home network".)

Download the Levven Control app from the Apple or Android store. Open the app and press continue on the start screen.

2. ENTER PIN

Enter the PIN number found on the Levven Q's bottom label.

5. IDENTIFY LOADS

The Levven app will display a list of Levven power controllers installed in the home. Each controller is connected to lights, exhaust fans, plugs, etc. Walk through the home and, one room at a time, turn each switch on and off to identify it in the app's devices list.

6. PERSONALIZE YOUR CONTROLLERS

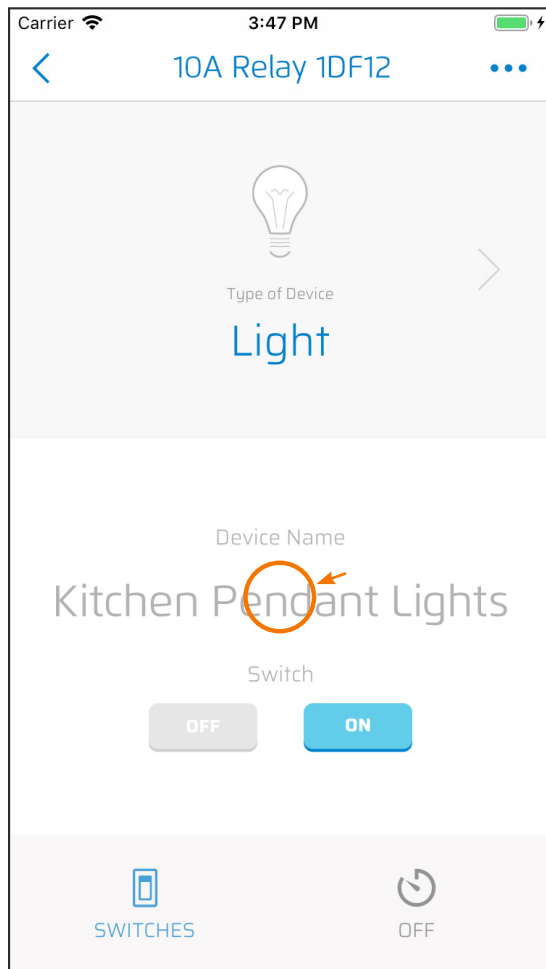

The app toggle switch will change to show "on" when a controller has been activated by the switch.

When you've identified a light, tap on the name of the controller to enter the detail screen.

Connecting your mobile device to Levven Q

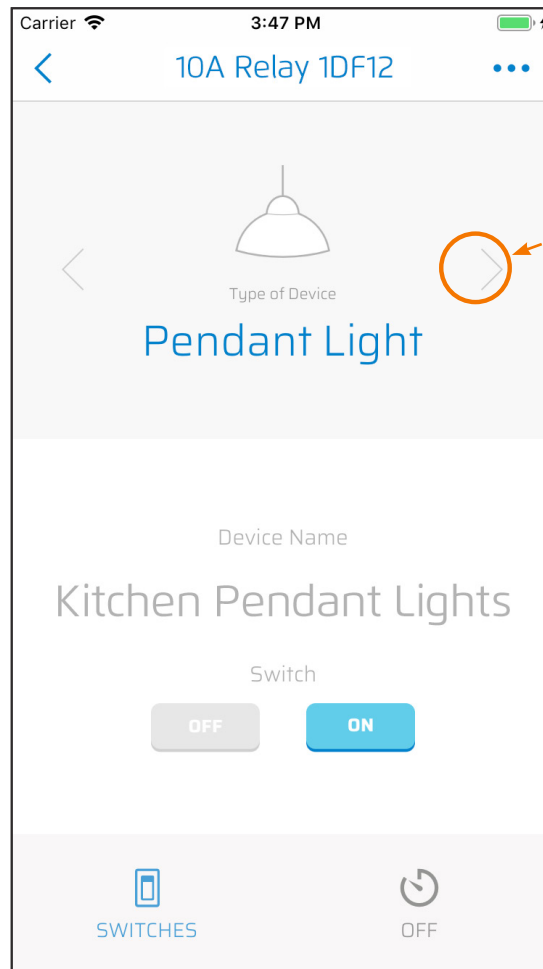

7. NAME THE CONTROLLER

Tap the name of the power controller to change it from the factory default to a name which is meaningful to you.

We suggest naming each controller with a "Room, Light" format so it's easy to identify what's being operated. In this example we'll name this controller "Kitchen Pendant Lights".

8. INDICATE TYPE OF LOAD

Swipe the image or press the arrow to select an image that best suits what the power controller is operating.

9. NEXT STEPS

Open the next instruction guide and follow the steps to create and use zones.
